

## Join us / Associate Structural Engineer & Principal Structural Engineer

McVeigh Consultants are an Integrated Engineering and Architectural Design Practice. We have been established for over 21 years and operate from bright contemporary offices in inner city Newstead. We have been steadily growing, even in recent times, and have a solid future workload in the pipeline.

McVeigh Consultants has a ISO9001:2008 externally audited Quality Management System in place and has a Queensland State Government Pre-Qualification Classification of PQC4.

We are currently providing services to the Retail, Industrial, Residential, Education and Commercial Markets. We also provide services to the Land Development Industry and are looking to explore further opportunities in Mining and Infrastructure.

Our integrated teams consist of engineers, architects and technicians all work seamlessly together to provide our clients with a service that is unique in the marketplace. We are able to sell our services on the basis of value and do not face the same downwards pressure on fees that our competitors suffer from. Our business model means that our engineers do not face frustrating delays or re-work waiting for outside consultants to provide base information for our work to proceed. We drive the bus as opposed to being passengers on the bus !

**Please send your CV and a cover letter to

**We currently have two unique opportunities for Associate Level Structural Engineers in our firm.**

**Our new Practice Area Leader (PAL)** will achieve great satisfaction and pride from seeing design and technical excellence being delivered by all teams in the firm. Our PAL will have the option of leading our specialist structural engineering team which will be the “go to team” for all of our engineers and technicians who are facing new and exciting technical challenges. Our PAL will be involved in schematic and detailed design reviews of all significant projects as well as leading the continued development and implementation of our structural engineering design and site standards. Our PAL will have 20% of their time specifically allocated to non-project PAL activities.

Alternatively our PAL may also be a Senior Engineer in one of our integrated design team with small team management and leadership responsibilities.

In any case our PAL will love design and technology and like working with a highly motivated team. Our PAL will develop a high technical profile in the industry.

**Our new Design Team Leader (DTL)** will make sure our clients are satisfied on our projects. Our DTL will also lead and manage a larger generalist engineering team or perhaps an integrated design team. McVeigh DTL's manage and lead in a manner consistent with our core values of enjoying work, improving the quality of the built and natural environment and adding value for our clients, ourselves and our firm. Our new DTL will enjoy providing Structural Engineering design & site services consistent with our established procedures and practices.

Our DTL will relish the opportunity of leading and managing a highly motivated team and providing best practices engineering solutions for our client's projects. Our DTL will develop a high commercial profile in the industry.
