

Join us / **Structural Engineer**

McVeigh Consultants is an integrated engineering and architectural design practice.

We have been established for over 20 years and operate from bright contemporary offices in inner city Newstead. We have been steadily growing, even in recent times, and have a solid future workload in the pipeline.

McVeigh Consultants has a ISO9001:2008 externally audited Quality Management System in place and has a Queensland State Government Pre-Qualification Classification of PQC 4.

We are currently providing services to the retail, industrial, residential, education and commercial markets. We also provide services to the land development industry and are looking to explore further opportunities in mining and infrastructure.

Our integrated teams consist of engineers, architects and technicians all working seamlessly together to provide our clients with a service that is unique in the marketplace. Our integrated design business model means that our engineers do not face frustrating delays or re-work waiting for outside consultants to provide base information for our work to proceed.

July 2010 / McVeigh Consultants Pty Ltd www.mcveigh.com.au

McVeigh

We currently have a unique opportunity for a Structural Engineer to join our firm.

The person we are looking for will have 3-5 years post graduate experience in structural engineering, with CPEng accreditation or be working toward it in the near future. A typical working week will involve:

- Schematic design development
- Detailed design calculations
- Site inspections
- RFI responses
- Day to day liaison with clients, external and internal team members
- Working within an integrated team under the supervision of team leader

Specific skills:

- Structural design skills including: structural steelwork, cold formed metal structures, reinforced concrete, pre-cast and tilt up concrete, post-tensioned concrete, timber and residential structures
- Job management and time management skills
- 3D visualization and conceptualisation skills
- Structural analysis and design software skills including: SLABS, RAPT, Microstran, RC Building
- Ability to work with minimal supervision

Attention to detail, 'systems thinking', a healthy sense of humour and a positive can-do attitude are a must!

We offer a generous training budget and the opportunity to work on a range of different projects.

We are very keen to fill this role. If this sounds like you, please contact us immediately!

To find out more, please submit your CV and a covering letter by email to recruit@mcveigh.com.au
